2012–2015 **Playtech**
Head of application security at Playtech

During the job at Playtech, I was head of application security and lead the SDL (Secure Development Lifecycle) methodology domain of the organization. While working in this domain, my main activities were code reviews and writing Threat Modeling and Architecture Design reviews for the company's products. It required training and guiding developers for secure coding development mainly for the following technologies: HTML5, Java, .NET, C ++ and leading the product's Pentest. In addition I worked on SAST and DAST technology which include implementing application tools such as Appscan, Qualys, Checkmarx, and MVM.

The job also contained governance and regulation activities by accompanying the PCI and ISO27001 procedures for Playtech's certifications. One of the job descriptions include writing security policies, for example: secure remote access for the third party, DLP, Cloud Security baseline, and Big Data Security.

At Playtech I lead network security projects such as Websense, Web Gateway, DLP, and Mail Relay.

I was also a member of the incident response team of Playtech.

2014–2015 Titans Security
Senior lecturer and staff member at Titans security limited

I have trained the following courses:

Application and software security, Network security and OS security.

I also published the following articles for the Global Security magazine:

- * Botnet attack and how to deal with the attack.
- * How to adapt source code in a secure manner in the organization.
- * Big brother - How to protect your personal privacy.

2000–2012 Radware
Cyber Security Researcher

Part of the job description includes providing and giving service for cyber attacks protection for a variety of the company's international clients.

In addition I developed signatures for DPI (Deep Inspection Protocol) traffic over IPS product platform called Defense Pro.

High familiarity with different types of DDOS, and writing modules in Defense Pro identification and prevention against different types of attacks.

In recognition with various cyber- attack Products: MU, Breaking Point.

In recognition with Websense's DLP system.

In recognition with Websense's Web Content.

High recognition with Checkpoint and Juniper's Firewall systems.

In recognition with RSA systems for Remote SSL VPN management.

Penetration testing for systems in the organization.

In recognition with Metasploite platform.

In recognition with a ActiveBase against Sql Server and Oracle Server
